- JMeter, Postman, Swagger
- Sprint Planning, Code Reviews
- Docker

Ananthu S Kumar

Senior Software Engineer

Innovative software developer with a passion for Python and Django, skilled in crafting high-performing APIs and leveraging the power of AWS. Proficient in containerization, database management, and security implementation, I bring a dynamic approach to Microservices design and thrive in an Agile (SCRUM) environment. Ready to drive transformative solutions and contribute to cutting-edge projects.

Experience

Senior Software Engineer

Beinex Consulting Private Limited

2023 November- Present

Vismaya Infopark, Infopark Campus, Kochi, India

- **Project:** Aurex™, Working in the Governance, Risk, and Compliance (GRC) domain, focusing on areas risk management, audit, compliance, and business continuity

Leadership : Leading a small team responsible for developing core and general features of the product.

Architectural Expertise : Architected and developed the Proxy ContentType Model to enhance modularity and efficiency.

Dynamic API Development : Designed and developed a Dynamic Detail API and Quickview feature for enhanced data accessibility and user experience.

Visualization API Development : Architected and implemented Network Charts API for real-time data visualization and dependency mapping.

Optimization Efforts : Led code and query optimization to improve system performance.

Performance Testing : Developed JMETER-specific APIs to support robust performance testing.

Version Control & Code Quality : Skilled in handling Sprint planning, Merge Requests, Code Reviews, and implementing pre-commit checks.

Software Engineer

Fingent Global Solutions

2022 February - 2023 September

Carnival Infopark, Infopark Campus, Kochi

- **Project: Starter:** Led the development of a 'Starter' project with OAuth signups (LinkedIn and Google), admin & user signup with Simple JWT, email activation, SSO, and password reset. Implemented Viewset for the Investor Module and Dockerized apps for efficient deployment.

- **Project: AI ML Arena:** Developed AI ML Arena with a Django backend and sentiment analysis integration for an exceptional user experience.

- **Project: BBTV:** Managed AWS RDS database hosting, Lambda functions for batch processing, and Celery for data handling. Developed guidelines for duplicate content and compliance with branding requirements.

Associate Software Engineer

Techversant Infotech Pvt. Ltd.

2020 September - 2022 February

Lulu Cyber Tower 1, Infopark, Kochi

- **Project: Filim Hobo:** Developed and maintained user modules, CRUD APIs, and general features for a casting app. Designed data models for various entities and implemented APIs for project rating, liking, and search functionalities. Integrated Celery for delayed job processing, improving app performance.

- **Project: Titen Encircle:** Implemented user tracking for the project, with a cron job sending user details to the admin daily via email in CSV format. Managed deployment on AWS EC2 and incorporated design changes to align with new design requirements.
